Some people are fierce, unethical hunters eager to succeed no matter the cost. They don't care who they hurt to achieve their goals. April is one such woman, only her misdeeds are about to catch up with her. She's about to lose her freedom. In exchange, she'll get a locking collar with a shiny cow bell.

Before she became a major force in the business world, April worked at a small startup with a brilliant scientist. She and Logan were going to make the world a better place, except April decided to sell out. At the same time, she made sure a few legal tricks kept Logan from getting his fair share.

So when he shows up at her office years later, April expects an argument. Instead, he has a proposition for her. He says he's developed a new energy drink. If it's what he describes, this drink could be worth billions. He offers her a sample, and she tries it, never sensing the trap. Contained within those few sips are millions of nanobots, microscopic robots that Logan controls.

Logan uses those bots to rewrite her biology. First, he enhances her breasts, making them several cup-sizes larger. Then the bots trigger lactation. That's right. April can now be milked like a she-cow. This is only the start of her transformation. He isn't satisfied with simply using his old partner as a test subject.

No, he is going to retrain her. She will become his domesticated girl cow. Stripped of her title, responsibilities, rights, and privileges, April will eschew clothing. She'll wear her collar and bell. She'll moo and eagerly accept every milking, whether it's by hand or from the machine Logan built just for her. At first, April will hate this, but Logan and his bots can be very convincing. Before long, April might find herself begging and mooing for the chance to be his private cow.
