This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1906 Excerpt: ...three is so that you may go back and see where the mistake was when some one makes out a ticket wrong. That sounds quite simple, and yet nobody has turned out such a device. I thought I would invent one to order, three or four years ago. I consulted a mechanical expert and asked him to get it up for me. After a few days he called on me and laid on my desk what he called the literature of the subject--a bundle containing about 500 patents of similar devices, and told me he would be glad to get up the machine at \$50 per day, but could not tell how many months it would take. Edwin J. Prindle: Mr. Steinmetz's report of his remarks at the convention, concerning my paper on the "Art of Inventing" has been modified so that my oral reply to it does not appear to have complete connection with the matter, but as those who were present at the convention and who remember the matter will retain the impression of his remarks as they were actually delivered, I desire to make the following more complete reply to Mr. Steinmetz's remarks. Mr. Steinmetz' position was that inventing is a mere incident of engineering, and that inventing, considered by itself, is one of the forms of activity which is least worthy of respect. The engineer is doing engineering per se when he is designing structures and apparatuses for new situations and conditions without changing their principles. When, however, he is introducing new principles of operation, he is inventing, as distinguished from practicing engineering proper. Mr. Steinmetz seems to think that it is a higher grade of work to select from among known apparatuses, that apparatus best suited for a given condition, and to determine its size and proportion by the use of mathematics and engineering rules already in existence, ...
